C PROGRAMMING LAB RECORD

WEEK-5 PRACTICE SESSION CODING

M . JEEVAN KUMAR 241501074 AIML - B Question 1
Correct
Marked out of 3.00
F Flag question

Write a program that prints a simple chessboard.

Input format:

The first line contains the number of inputs T.

The lines after that contain a different values for size of the chessboard

Output format:

Print a chessboard of dimensions size * size. Print a Print W for white spaces and B for black spaces.

Input:

2

3

5

Output:

WBW

BWB

WBW

WBWBW BWBWB

WBWBW

BWBWB

WBWBW

```
Question 2
                    Let's print a chessboard!
Correct
Marked out of 5.00
                    Write a program that takes input:

₱ Flag question

                    The first line contains T, the number of test cases
                    Each test case contains an integer N and also the starting character of the chessboard
                    Output Format
                    Print the chessboard as per the given examples
                    Sample Input / Output
                    Input:
                    2
                    2 W
                    3 B
                    Output:
                    WB
                    BW
                    BWB
                    WBW
                    BWB
```

Question 3 Decode the logic and print the Pattern that corresponds to given input. Correct Marked out of 7.00 ₹ Flag question then pattern will be: 10203010011012 **4050809 ****607 If N= 4, then pattern will be: 1020304017018019020 **50607014015016 ****809012013 *****10011 Constraints 2 <= N <= 100 Input Format First line contains T, the number of test cases

Each test case contains a single integer N

Output First line print Case #i where i is the test case number In the subsequent line, print the pattern Test Case 1 3 3 4 Output Case #1 10203010011012 **4050809 ****607 Case #2 1020304017018019020 **50607014015016 ****809012013 *****10011 Case #3 102030405026027028029030 **6070809022023024025 ****10011012019020021 *****13014017018

Question 1
                     The k-digit number N is an Armstrong number if and only if the k-th power of each digit sums to N.
Correct
Marked out of
3.00
                     Given a positive integer N, return true if and only if it is an Armstrong number.

₱ Flag question

                     Example 1:
                     Input:
                     153
                     Output:
                     true
                     Explanation:
                     153 is a 3-digit number, and 153 = 1^3 + 5^3 + 3^3.
                     Example 2:
                     Input:
                     123
                     Output:
                     false
```

```

Question **3**Correct
Marked out of 7.00

Flag question

A number is considered lucky if it contains either 3 or 4 or 3 and 4 both in it. Write a program to print the nth lucky number. Example, 1st lucky number is 3, and 2nd lucky number is 4 and 3rd lucky number is 34 and so on. Note that 13, 40 etc., are not lucky as they have other numbers in it.

The program should accept a number 'n' as input and display the nth lucky number as output.

Sample Input 1:

3

Sample Output 1:

33

Explanation:

Here the lucky numbers are 3, 4, 33, 34,, and the 3rd lucky number is 33.

Sample Input 2:

34

Sample Output 2:

33344

```
Answer: (penalty regime: 0 %)
1 #include<stdio.h>
      int main()
  2 in 3 v {
  4
         int n=1,i=0,nt=0,co=0,e;
         scanf("%d",&e);
  6
7 v
8
         while(i<e)
             nt=n:
             while(nt!=0)
  10 ,
  11
               co=0;
               if(nt%10!=3&&nt%10!=4)
  12
               13
 14
  15
  16
             nt=nt/10;
  17
 18
             if(co==0)
 19
 20 ,
  21
                i++;
  22
  23
 24
 25
26
         printf("%d",--n);
         return 0;
 27 }
```
